The Quadriciser® is a Robotic Therapy System that gently moves all four limbs to provide a variety of targeted therapies using Continuous Passive Motion.

Still Acrobat Skiing at 75!
Using the Quadriciser every day allows me to be very active with my grandkids, outdoor sports and other activities. I owe it to God and the Quadriciser for maintaining good balance and staying mentally sharp to run my company. I get an excellent report after every physical and my doctor advises me to keep using the Quadriciser!

Larry Bohanan President and CEO of Quadriciser Corp.

The Quadriciser is designed to move the arms and legs in patterns that closely simulate walking and crawling. These motions are very natural to the body. Users who find it difficult or impossible to move on their own often report great benefit.

Quadricising Replaces Exercising
Seniors can benefit tremendously from regular Quadricising. The Centers for Disease Control reports that seniors have even more to gain than younger people by becoming more active because they are at higher risk for the health problems that physical activity can prevent. Using the Quadriciser may speed up the wound-healing process by as much as 25 percent.

Increase Mental Well-being
The Quadriciser will increase circulation to all parts of the body, including the brain, which may promote cell growth. This can also be beneficial in helping those with dementia and Alzheimer’s disease*.

Using the Quadriciser daily may delay or prevent many diseases associated with aging such as, diabetes, colon cancer, heart disease, and others**.
