- Improves Bowel and Bladder Function

Testimonial from Janice Walker Clinical Director
& Registered Occupational Therapist

Don't Let Your Body Limit You Get Moving!

The Quadriciser® is a Robotic Rehabilitation Therapy System that gently moves all four limbs to provide a variety of targeted therapies using Continuous Passive Motion.

The Quadriciser is designed to move the patient's arms and legs simultaneously in patterns that simulate walking and crawling. These motions are very natural to the body. Users who find it difficult or impossible to move on their own often report great benefits.

Seniors benefit tremendously from regular exercise.

Exercise increases circulation to all parts of the body, including the brain which promotes cell growth and may benefit those with:

- Alzheimer's Disease
- Parkinson's Disease
- Stroke
- Traumatic Brain Injury (TBI)
- Spinal Cord Injury (SCI)
- Acquired Brain Injury (ABI)
- Muscular Dystrophy
- ALS

GENTLY
MOVES ALL
4 LIMBS
MULTI DIRECTIONS

Improved Quality of Life
