- Extra Tension Cords
- 1 Gait Wedge
- 1 year Manufacturer Warranty

Child Model

Product Description

The Quadriciser Child Model is a motorized therapy device that facilitates gentle, synchronized and repetitive movement of all four limbs. It is designed to bridge the gap between passive and active motion and is a proactive measure against the complications of prolonged immobility. The Quadriciser performs 20 rehabilitative therapies including simulated walking, crossing midline and ankle dorsiflexion.

This model is specifically designed to accommodate smaller patients, featuring appropriately sized foot cradles and seat. Additionally, the reversed motor placement ensures the controls remain safely out of the child's reach.

Specifications

Size

38.5" x 33.25" x 83" (L x W x H)

Recommended Minimum Space
